

PROCUREMENT SUSTAINABILITY POLICY

As the Catamaran Quality Times Resort Hotel Family:

Our primary goal is to ensure sustainability in procurement in order to protect the environment for sustainable tourism, minimize the negative impacts of our business on the environment, and contribute to the development of the local community and surroundings.

We pay attention to ensuring that the food and beverages procured for our facility are of high quality, suitable for their intended purpose, comply with relevant regulations, and are preferably sourced locally.

During our business operations, in order to limit and minimize the environmental impact, we consider not only price, quality, and suitability during procurement, but also environmental factors:

- Causes less waste generation
- Least harmful to the environment
- Consumes less energy

We prefer certain products.

When purchasing products, we consider not only the purchase cost but also the lifetime cost.

We always support local producers and, whenever possible, procure products from local suppliers, adopting the principles of promoting regional development, introducing local products, reducing transportation and air pollution, and ensuring sustainable service and growth.
